Hey Peter,

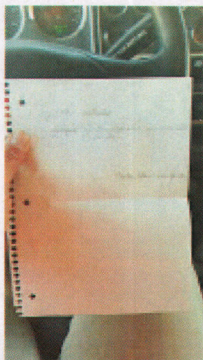

Thanks for the update on the bond and permit progress.

Concerning the progress on the fuel spill, the reason you still saw fuel contaminated soil was because we had not moved the soil offsite, just mixed it up a little at that point in time. On Monday of this week, 10/12/15, I sent a guy down to load up the fuel contaminated soils into a dump truck and pup. I relayed to him that I needed pictures and documentation of the cleanup process. He used the onsite excavator and determined that the fuel had penetrated about the top 6 inches to a foot of topsoil. To be sure he over dug and loaded about the top 2 feet of soil into the truck. I made some phone calls to the Sanpete County landfill's office to see if there was a site locally in Sanpete County that would take fuel contaminated soil. The office claimed that the White Hills Landfill near Mayfield would take the fuel contaminated soil. I then sent the truck loaded with the contaminated soil down from Spring City to the White Hills Landfill. Attached is a picture of a signed copy of paper showing weight of the material, 47,580 lbs., and signed by the scale house lady, Ronda Adair, and that the contaminated soils was indeed sent to an offsite facility claiming to take such materials.

I am unsure what else you need concerning this matter. Please let me know if there is.

Thanks for your help on this, Joe Stoddard
